EXPORTS BY MODE OF TRANSPORT

CALENDAR YEAR 1965

Published by Authority of  
The Minister of Trade and Commerce

## Explanatory Notes

### 1. Nature of Goods:

This publication presents statistics on domestic exports and re-exports according to the mode of transport used in shipping the goods from Canada. Any goods shipped to an overseas destination but shown as leaving Canada by road or rail will have passed into the United States, those moving by sea or air to the overseas destination.

## TABLE OF CONTENTS

	Page
EXPLANATORY NOTES .....	5
KEY TO ABBREVIATIONS OF COUNTRIES .....	10
SUMMARY TABLES:	
1. Domestic Exports by Country and Mode of Transport .....	11
2. Total Exports by Country and Mode of Transport .....	14
DETAILED TABLES:	
3. Value of Domestic Exports by Commodity Groups - Country and Region of Customs Clearance cross-classified by Mode of Transport .....	17
4. Value of Re-Exports - Country and Region of Customs Clearance cross-classified by Mode of Transport .....	145
5. Quantity of Domestic Exports for Selected Commodity Groups - Country and Region of Customs Clearance cross-classified by Mode of Transport .....	147

### 2. Source of Data:

Export statistics are compiled from information appearing on customs export entries except for data on electricity and on crude petroleum exported by pipeline. Electricity exports are reported by the exporting firms through the National Energy Board, and oil exported by pipeline is reported by the pipeline companies directly to the Dominion Bureau of Statistics.

Digitized by the Internet Archive

University of Toronto

## Explanatory Notes

### 1. Nature of Report:

This publication presents statistics on domestic exports and re-exports according to the last means of transport used in shipping the goods from Canada. Any commodity exported to an overseas destination but shown as leaving Canada by road or rail will have passed into the United States, thence moving by sea or air to the overseas destination. On the other hand, any commodity shown as leaving Canada by air or water can be considered as a direct shipment from a Canadian port.

### 2. Presentation of Data:

Four principal modes of transport are covered in this report:

1. Water Transport (includes ship and barge)
2. Road Transport (includes truck, car and bus)
3. Rail Transport (includes railway express, even if the express company has moved the goods by road)
4. Air Transport (includes air express but not air mail)

A fifth designation "Other" covers such movements as pipeline, mail and parcel post and other miscellaneous modes of transport; totals for each of these latter categories appear in Table 1 and Table 2.

Five tables appear: the first, a summary of the value of domestic exports by country by mode of transport; the second, a summary showing the value of total exports (domestic and re-exports) to each country by mode of transport; the third, showing the value of domestic exports in each commodity group to each country and from each region of customs clearance by mode of transport; the fourth, showing the value of re-exports for all commodity groups to each country and from each region of customs clearance by mode of transport, and the fifth, showing quantity information on domestic exports, for those commodity groups where it is available, in the same detail as Table 3.

### 3. Source of Data:

Export statistics are compiled from information appearing on customs export entries except for data on electricity and on crude petroleum exported by pipeline. Electricity exports are reported by the exporting firms through the National Energy Board, and oil exported by pipeline is reported by the pipeline companies directly to the Dominion Bureau of Statistics.

4. Time periods:

Export statistics for any period include all goods declared on export entries received at DBS during the period, and on electricity and pipeline reports received within 12 working days of the close of the calendar month. Most export entries reach DBS within a week of the date the goods leave Canada, although entries for some waterborne shipments arrive much later. Electricity exports are usually included in statistics for the period in which these exports actually occurred. Pipeline exports of crude petroleum are reported too late for inclusion in statistics for the month when they occurred; there is therefore a one month lag in the statistics for this particular movement.

5. Coverage:

This report covers both domestic exports and re-exports:

- (a) Domestic Exports: Statistics of Domestic Exports include both goods which are wholly produced in Canada and goods previously included in import statistics which have been changed in form by further processing in Canada and then exported.
- (b) Re-Exports: Statistics of re-exports include only goods previously included in import statistics which are exported from Canada in the same form as when imported. Minor operations such as sorting or re-packing are not considered as changing the condition of imported goods. From January 1964, statistics of re-exports have included exports from Customs warehouses, which were previously excluded from this record.
- (c) Exclusions: The following commodity movements are excluded from export statistics: gold and gold products where the value of the gold content is 80% or more of the total value except for dental gold alloy which is included in commodity group 880- and a small amount of gold scrap in the form of jewellers' sweepings which is included in commodity group 256-; current coin; settlers' effects; private donations and gifts; tourist purchases; goods shipped to Canadian armed forces or diplomats abroad or re-exported from Canada by forces of our N.A.T.O. allies or by foreign diplomats; temporary exports for exhibition or competition (and film exported for exhibition or processing, or returned after exhibition or processing in Canada); exports to Canada's N.A.T.O. allies financed under the Defence Appropriation Acts; bunker supplies and ships' stores sold to foreign vessels or aircraft in Canadian ports; generally, all temporary exports and goods merely moving in transit through Canadian territory.

6. Countries credited:

Exports are credited to the country to which they are consigned at the time the goods leave Canada, i.e. to the furthest known destination of the goods.

7. Regions of Clearance:

The regions appearing in Tables 3, 4 and 5 are: Atlantic, Quebec, Ontario, Prairies and British Columbia. Exports shown for the Atlantic region include those goods which cleared Customs in the provinces of Newfoundland, Nova Scotia, Prince Edward Island and New Brunswick. The Prairie region figures include goods cleared through Customs ports located in the provinces of Manitoba, Saskatchewan and Alberta. Exports credited to British Columbia include, also, those goods clearing Customs in the Yukon.

Customs clearance in a particular region should not be taken as necessarily indicating origin within that region; inter-regional movement may have and in many cases will have occurred prior to Customs clearance.

8. Quantities:

The final table of this publication shows quantities in terms of the units specified in the Export Commodity Classification, Volume I, Cat. No. 12-521, except the unit for commodity groups 71 and 91 which has been changed to hundredweight from pounds because of table design. For certain commodity groups, notably "Cereals, unmilled", conversions have been made to a common unit of quantity to allow showing quantities which could not otherwise have appeared. Where no quantity data is collected or quantity information is in unrelated units that commodity group will not appear in the quantity table. The quantity shown for commodity groups largely composed of classes that specify quantity but also containing few that do not and for groups incorporating classes that contain both whole units and parts, cannot be related to the value (see below). Such groups are identified, in the quantity table, by an asterisk to the right of the unit of quantity designation. It is felt, however, that omitting the quantity entirely for such groups would eliminate data useful to some users of these statistics.

Units of weight or volume relate to the weight or volume of the goods and exclude the weight or volume of any packing required for shipment. Units of number refer to the number of complete (or substantially complete) units exported, excluding parts. In groups where both complete units and parts are included, the average value per complete unit can not be calculated. No quantity information is shown for re-exports since these are treated, herein, as comprising one commodity group.

9. Values:

Export entries define the value of exports as the "actual amount received or to be received in terms of Canadian dollars, exclusive of all charges" (freight, insurance, handling, etc.). This definition would give values f.o.b. point of consignment for export, but in practice it is not always followed. For example, in recent years a significant but indeterminate proportion of exports has been reported in United States dollars.

10. Abbreviations:

Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all commodities and commodity groups appear in the Export Commodity Classification, Vol. I. The letters "n.e.s." mean "not elsewhere specified".

11. Comparability with other statistical series:

Users may wish to compare the export statistics appearing in this report with the transportation statistics produced by the Transportation and Public Utilities Division of DBS. While External Trade statistics are compiled from export entry forms (B-13's) submitted by exporters, those of the Transportation Section are derived from reports submitted by carriers. This basic difference in source material provides an opportunity to view the movements of goods from Canada from two distinctly different angles.

Export statistics are basically a commodity value record. Volume, weight or size of export shipments is secondary, since such quantity information is not at present always available on export documents, nor always presented in a common unit. Accordingly, value provides the only measure by which all exports may be assessed. Transportation statistics, on the other hand, are primarily concerned with gross tonnage of goods moved and with revenue received by the carrier in respect of such movements.

While direct comparison cannot always be made, it is generally possible to account for major differences in the data presented. For example, Canadian trade statistics covering the export of some metal ores show the quantity of metal contained in the ore, while transportation statistics show the gross tonnage of the ore movement.

Another factor making direct comparisons difficult is the inclusion in transportation statistics of a category described simply as "General Cargo" or "General Freight" where knowledge of commodity content is limited. No such general category exists in Canadian trade statistics since every export must be described as to commodity.

11. Comparability with other statistical series: (Concluded)

Differences of the types outlined above range across all modes of transport but reconciliations can usually be worked out for water and rail, where transportation statistics do provide considerable commodity detail. Exports by air cannot be compared as the Transportation Section does not collect commodity data for this mode of transport. In road transport, commodity detail in transportation statistics is minimal and comparisons, therefore, are rarely possible.

Comparability in respect to pipeline movements of crude petroleum and natural gas, and the movement of electrical energy across the border will be very close since External Trade statistics and those produced by the Energy Statistics Section are derived from the same sources. There are some movements of crude petroleum and natural gas by modes of transport other than pipeline; these, of course, must be considered in the light of the limitations of comparability outlined for those other modes of transport.
